MixRite & UFR

- New 14 Series MixRite 14.CW .05
- .9 to 14 GPM
- Lower than .9 available when used with 57. UFR
- 57. UFR is a low flow device designed to help MixRites work on very low flows (as low as 2/10 per gal.)
- Max flow at less than 60 PSI
- Aflas O-rings and Viton Extreme Chemical Seals
- Hastelloy springs and plastic engine springs for chlorinated chemicals
- Works great for spraying hundreds of cleaning chemicals, sanitizers including chlorine, fertilizers, and mild acids, both mineral and organic, that do not generate heat

1% to 5%
injection rate
